• Bhopal, Madhya Pradesh, India

Summary

Dedicated **Front-End & Mobile App Developer** with hands-on experience building modern, responsive, and scalable web and mobile applications using **React.js, React Native, TypeScript, Next.js, and TailwindCSS**. Skilled in developing reusable UI components, cross-platform mobile applications, and pixel-perfect interfaces from design specifications. Experienced in delivering both **product-based and enterprise solutions**, with additional expertise in **Salesforce Lightning Web Components (LWC)**. Strong understanding of responsive design, component-driven architecture, API integration, and performance optimization. Focused on writing **clean, maintainable, and scalable code** while delivering seamless and user-friendly experiences across web and mobile platforms.

Skills

Frontend: React.js, Next.js, JavaScript, TypeScript, HTML5, CSS3, RESTful APIs

Mobile Development: React Native, Expo, NativeBase, NativeWind, React Navigation

UI & Styling: Tailwind CSS, Material UI, Bootstrap, PrimeReact, PrimeFlex

Database: MongoDB, Superbase, MySQL, PostgreSQL

Tools & Design: Git, GitHub, Figma, Canva, Stitch, UI/UX, Postman

Experience

TechKun — https://techkun.vercel.app/

Bhopal, Madhya Pradesh, India

Software Developer

06/2025 - 07/2026

- Architected and delivered a full-featured e-commerce platform from scratch — owning the entire frontend: UX research, Figma wireframes, component architecture, API integration, and mobile-responsive implementation across all breakpoints.
- Engineered a library of reusable React components and custom hooks — leveraging modern UI systems like shadcn/ui to build consistent, accessible components, while abstracting complex logic such as data fetching, authentication state, and form handling into clean, composable hooks that significantly reduced boilerplate.
- Spearheaded R&D initiatives — evaluating new libraries, frontend patterns, and AI tooling to inform technical decisions, reduce technical debt, and keep the team aligned with modern industry standards.
- Implemented dynamic routing, static site generation for content-heavy websites.
- Implemented advanced authentication mechanisms, including JSON Web Tokens (JWT), OAuth 2.0, to ensure security and user data protection.
- Integrated RESTful web services for effective server-client data exchange, using Webpack to configure development tools like linters, Husky, and ESLint based on build targets
- Owned end-to-end UI/UX design — producing user flows, interactive Figma prototypes, and scalable design systems that served as the single source of truth for design-to-dev handoffs.
- Applied optimization techniques like lazy loading to reduce page size and load times, enhancing the user experience.
- Implemented an atomic design framework in React, creating a reusable and scalable UI component library integrated with shadcn/ui principles for consistency and faster development.

Infomover Technologies — https://infomovertech.com/

Varodara, Gujarat, India

Front End Developer

02/2024 - 06/2025

- Proficient in React Tailwind CSS Library, specializing in creating theme variations and implementing pixel-perfect designs from Figma.
- Demonstrated expertise in writing efficient, well-documented code using TypeScript and ES6, ensuring codebase maintainability and scalability.
- Designed and developed the marketing website for the workforce monitoring platform, including creating its image content on Canva and overseeing its implementation in Next.js.
- Contributed to a client project for a Singapore-based company, developing a pixel-perfect, responsive design using Salesforce Lightning Web Components (LWC) as the framework, based on a detailed Figma layout.
- Created a mobile app using React Native for the time monitoring application, providing easy access to software information on mobile devices.
- Started with 'atoms' like Button, Input, Toggle Button, Dropdown, and many others, then composed 'molecules' such as Form Fields, each built using props for customization.
- Created a scalable design system with reusable components to ensure consistency and maintainability.

Education

Jai Narain College of Technology (RGPV University) — Bhopal, Madhya Pradesh, India
Bachelor of Technology . Artificial Intelligence & Data Science — 2021 - 2025

Projects

Ghar Dekho (Real Estate Mobile App)

Cross-platform React Native app for buying, renting, and listing properties — with search, chat, memberships, payments, push notifications, and AdMob monetization for free users.
Roles and Responsibilities:

- Built property discovery flows: Home, Search, Filters, Wishlist, Property Detail
- Implemented real-time buyer–seller chat with Socket.io
- Added role-based flows for Buyer / Owner / Agent (dashboards, leads, listings)
- Integrated membership gating + Razorpay payments
- Implemented AdMob monetization with free vs paid user ads exclusion
- Added location-based nearby listings using device geolocation
- Built Post Property flow with image picker and form validation
- Integrated FCM push notifications for leads/visits/chat updates

Kavengo

https://www.kavengo.com

Kavengo is an online e-commerce application serving a Turkey-based client. The platform is designed to offer users seamless access to product catalogs and facilitate easy order placement and payment. The aim is to unify shopping, checkout, and store operations across the client's business on a single platform.
Roles and Responsibilities:

- Developed a responsive e-commerce storefront using Next.js, React, and TypeScript for product browsing, search, and category navigation
- Implemented user auth flows (login, register, forgot/reset password) and account pages for orders, reviews, and settings
- Integrated Iyzico payment checkout and order status polling for secure online payments
- Developed admin modules for products, categories, attributes/variations, promotions, shipping, and order management
- Built reusable UI components with Tailwind CSS and Radix UI, ensuring consistent UX across shop and admin panels
- Integrated Cloudinary for product/category image uploads and Excel-based bulk product upload

Productiviti Mobile App

Cross-platform React Native mobile dashboard for employers to monitor workforce productivity tracked from employee desktops (Windows/Mac) — including attendance, work time, app usage, screenshots, and team analytics, with secure JWT-based authentication.
Roles and Responsibilities:

- Built modules for attendance, work metrics, app usage, screenshots, and team analytics with real-time data from REST APIs
- Implemented secure JWT-based authentication with Expo Secure Store for token management
- Designed navigation using React Navigation (Stack + Drawer) for multi-business and multi-user views
- Created reusable UI components and charts for productivity insights using NativeBase, NativeWind, and Gifted Charts
- Integrated role-based access and permissions to control employer/manager visibility across teams and projects
- Developed a cross-platform React Native (Expo) mobile dashboard for employers to monitor workforce productivity tracked
